

## Investment Flexibility, Powered by Deft

The need for flexibility has never been greater. Applications, business processes, and entire organizations continue their move to the cloud. Distributed workforces are now the norm. What's next? That's unique for you and your organization, but being able to quickly respond to change is critical.

At Deft, being flexible in our support of you is how we make a difference for our clients, daily, and how we achieve our mission - to Deliver on the Promise of Technology.

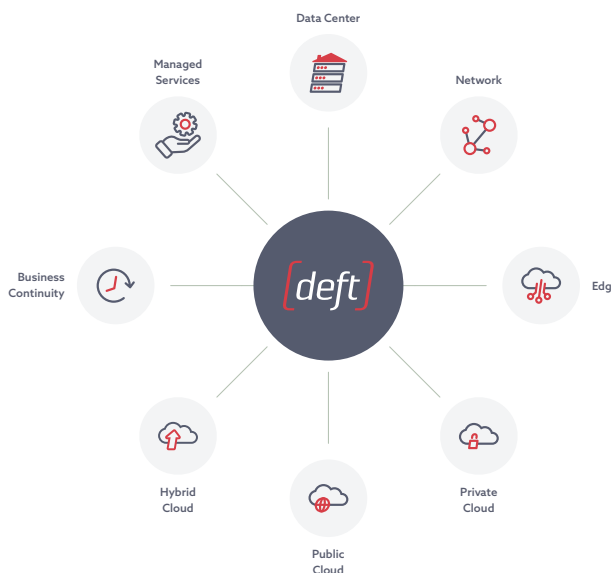

### What is Investment Flexibility?

As your trusted advisor, we are dedicated to staying aligned with your objectives – operationally, technically, and financially. This is why we pioneered the concept of Investment Flexibility. Investment Flexibility offers you the opportunity to transition your current monthly investment with Deft as your business, technical, or financial needs dictate – with no penalties.

### How Does Investment Flexibility Work?

With Deft, you have the ability to tune your investment to the most appropriate infrastructure and services necessary to meet your needs.

Whether this is a transition from on-prem to colocation, a transition from colocation to cloud, or the transformation of your business and applications to cloud-native environments, we have the proven experience and expertise to support your business. It's this simple. Your investments can be shifted in whole or in part at any time during your term with Deft so you always have the right solutions and services at the right time for your business.

### Why Deft?

We provide the financial, operation and technological direction & guidance you need to navigate increasingly complex competitive and technical landscapes. We empower you to take advantage of the cloud by making it a reality, in all its forms (public, private, hybrid, multi-cloud);

We orchestrate the migration of applications and infrastructure to new, modern environments – and further assisting you by managing as much of it as you want us to. We provide visibility, transparency and flexibility to IT management, governance and costs – including the ability to shift your IT investment between services as your need change; and we provide the expertise and support you want to execute your digital transformation initiative, guaranteeing that initiatives remain on schedule and aligned with business goals.
