

Object Storage, Powered by Deft

In 2022, over 2.5 quintillion bytes of data are created every day. The strain this places on organizations is unprecedented. Whether it's addressing storage capacity and accessibility, durability and reliability, or security and compliance, the asks put on today's IT organizations are outpacing their capacity.

This is where we come in. Object Storage from Deft is a cost-effective cloud storage option for capacity-intensive applications. Start small (or big) and seamlessly scale your storage as your business grows. You use the intuitive, web-based Object Storage Management Console, our native Deft Object Storage APIs or the Amazon S3 HTTP REST API to manage your environment and we take care of the rest.

The Risk

518%

According to GRC World Forums Research, ransomware demands increased by 518% in 2021 to \$570,000.

80%

According to a Pollfish study of 1,100 IT and cyber security professionals, 80% of their organizations experienced a ransomware attack in 2021.

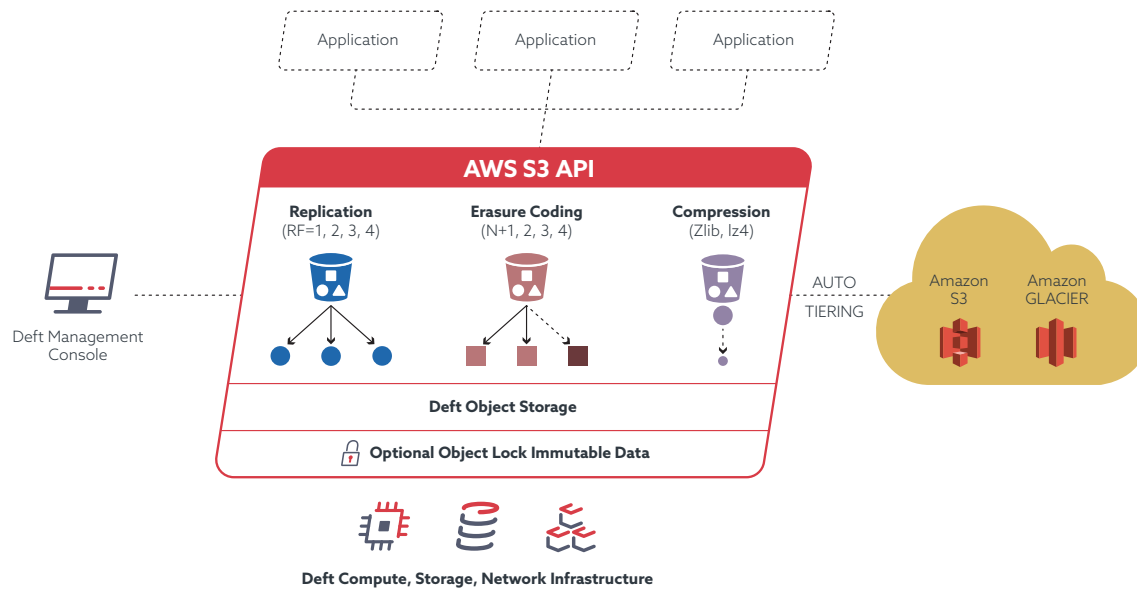

Ransomware threats and disaster events are more prevalent than ever. Be prepared. Deft's Object Storage supports Object Lock, which enables you to make your data immutable and, therefore, invulnerable to hacker encryption or deletion. Data immutability — validated in U.S. government certification testing — ensures the availability of an uninfected copy for reliable recovery in the event of a ransomware attack or another disaster event.

The Reward / Object Storage from Deft

- Scalability: Grow your storage in step with your business to Petabyte and Exabyte scale
- Immutability: Immutable configurations ensure the availability of an uninfected copy of your data for reliable recovery in the event of a ransomware attack or another disaster event
- Durability: 99.99995% durability SLA ensures your data is protected against site-level failures, errors, and threats
- Reliability: 99.9995% reliability ensures your data is always accessible
- Integration: AWS S3 standard protocol, APIs and software tools make integration a snap
- Experience: 22+ years of delivering mission critical data center and cloud solutions for industry-leading companies

How It Works

Object Storage from Deft is simple. Select your location. Select your initial storage requirement. Choose Object Lock (or not) and in minutes you'll have a quote and access to your environment. Simple, straight-forward pricing and industry-leading support make it a snap.
